

InnaIT FOR SMALL & MEDIUM BUSINESSES

Password compromise and URL spoofs causing concerns? InnaIT for SMB will remove your apprehensions!

This is what we offer

A super-robust solution which will eliminate login credential compromise problems, ensure the right persons are accessing the systems they are supposed to access. In addition, a solution which will not have you bother about complicated jargon like 'software integration', 'application development' and so on and will rather let you fire up the system quickly and put it in use efficiently!

These are the benefits of the system we can deploy for you:

- Enable employees to perform their Windows login and Domain access easily and securely
- Provide Single Sign-on access to your browser based applications & services
- Mobile app based Time & Attendance marking

A solution that...

Does not need complex integrations

Can be implemented quickly and used

Is simple to implement and use

How does InnaIT for SMB work?

A small piece of software which we call the InnaIT Credential Provider – this is configured on the user computer

A web based application (SaaS) which runs off our servers (or yours if you need it that way!)

A tiny USB token / biometric devices – one for each user

A SOLUTION THAT SCALES ALONG WITH YOUR BUSINESS
